

## **People to know - Chapter 1**

**Willhelm Wundt** - founded the first psychology lab in 1879 at the University of Leipzig in Germany. The "father of psychology," used introspection (examining your own conscious experience)

**G. Stanley Hall** - opened the first psychology lab in America (Johns Hopkins) and was the first president of the APA in 1892. Also studied adolescence

**William James** - taught the first psychology classes in the US at Harvard. Created functionalism, which looks at how our thoughts and behaviors help us adapt. Said consciousness is a "stream"

**Edward Titchener** - Wundt's student. Created structuralism, which used introspection to break the mind into its basic elements. Had his lab at Cornell

**Mary Whiton Calkins** - student of William James. Finished all the PhD requirements at Harvard but was denied the degree because she was a woman. First female president of the APA (1905), studied memory

**Mamie Phipps Clark** - first Black woman to earn a psychology PhD from Columbia. Her research on how prejudice and segregation affect children was used in Brown v. Board of Education (1954)

**Margaret Floy Washburn** - first woman to actually earn a PhD in psychology (Cornell, 1894). Student of Titchener, wrote The Animal Mind

**Ivan Pavlov** - Russian physiologist who discovered classical conditioning (learning by association) when his dogs learned to salivate to signals that food was coming

**John B Watson** - founded behaviorism. Said psychology should only study behavior you can see and measure, not the mind

**B.F. Skinner** - behaviorist who studied operant conditioning, learning through rewards and punishments. Behaviors with good consequences get repeated

**Sigmund Freud** - created the psychoanalytic perspective. Behavior and personality come from unconscious conflicts, and childhood experiences matter a lot. Started talk therapy

**Carl Rogers** - humanistic psychologist. Believed people are basically good and naturally grow in a positive direction

**Abraham Maslow** - founded humanistic psychology with Rogers. Known for the hierarchy of needs

**Plato** - Greek philosopher who thought knowledge is inborn, already in the soul at birth. The nature side of nature vs nurture

**Descartes** - "I think, therefore I am." Said the mind and body are separate things that interact (dualism)

**Charles Darwin** - his theory of natural selection influenced psychology. Traits that help survival get passed on. Inspired functionalism and the evolutionary perspective

**Aristotle** - Plato's student who disagreed with him. Said we learn through our senses and experience (empiricism). The nurture side

**John Locke** - said the mind at birth is a blank slate (tabula rasa) and experience writes on it. Also nurture
